

ICB Pharma is a family business, one of the most innovative chemical companies in its sector, operating internationally.

In excellently equipped laboratories, ICB Pharma's scientists create innovative products used in the following sectors: health protection, sanitary hygiene, agriculture, gardening and animal breeding. The dominant position in the offer is taken by the products dedicated to the elimination of biological threats, e.g. sanitary pests, human parasites, and agrophages.

ICB Pharma's products are the example of most modern solutions, where highest biological efficacy is linked with minimization of unfavorable influence on people and the environment. In case of many of our products, the original and highly advanced technologies – e. g. micro and nano encapsulations are applied.

ICB Pharma's activity perfectly fits into the development trends in practical chemistry and biology. That is why the manufactured products are appreciated and in common usage worldwide. In many countries, they introduced a true breakthrough in solving difficult issues concerning environmental threats.

In the field of health protection, ICB Pharma is famous for excellent and safe solutions in pediculosis treatment or neutralizing the allergenic factors.

In the area of sanitary hygiene, the introduction of innovative microencapsulated products, as well as the original solutions in mosquito control, was a real turning point in pest control sector.

In animal breeding the non-chemical, safe method of poultry ectoparasite control was successfully put into practice.

ICB Pharma became famous worldwide also for excellent solutions in plant pest management, with no traditional, chemical pesticides.

In terms of the company's developmental activities and operations, ICB Pharma cooperates with many renewed scientific institutions in the world. Our employees take part in many research projects. We also take active part in scientific conferences, trade shows and exhibitions. Such a policy allows our company to function according to the highest standards, the newest trends as well as to constantly raise the prestige.

We are present in the fields of medical devices, professional pest control, animal health, agrochemicals for the rural market and home and garden retail.

The company's offer is complemented by the services of our chemical laboratories, functioning in the area of Products' Research and Development as well as Physio – chemical Analyses.
